

# Conjunctive Management Well Location Analysis

September 17, 2009  
Karen M. Torres  
County Hydrologist

# Conjunctive Management Plan

- Protection of Local Resources: Groundwater will only be used as a back-up supply to the BDD.
- Reliability of Supply: Having diverse supply insures public welfare
- Acequia Protection: Plan affirms County Policy of protection of acequia water rights
- Optimization of Public Assets: The proposed multi-year rolling average reduces the purchase of water rights

# Well Suitability Analysis

- Team Effort
- Mapped Based
- Allows for flexibility and ease of analysis
- Can be used as a template County wide

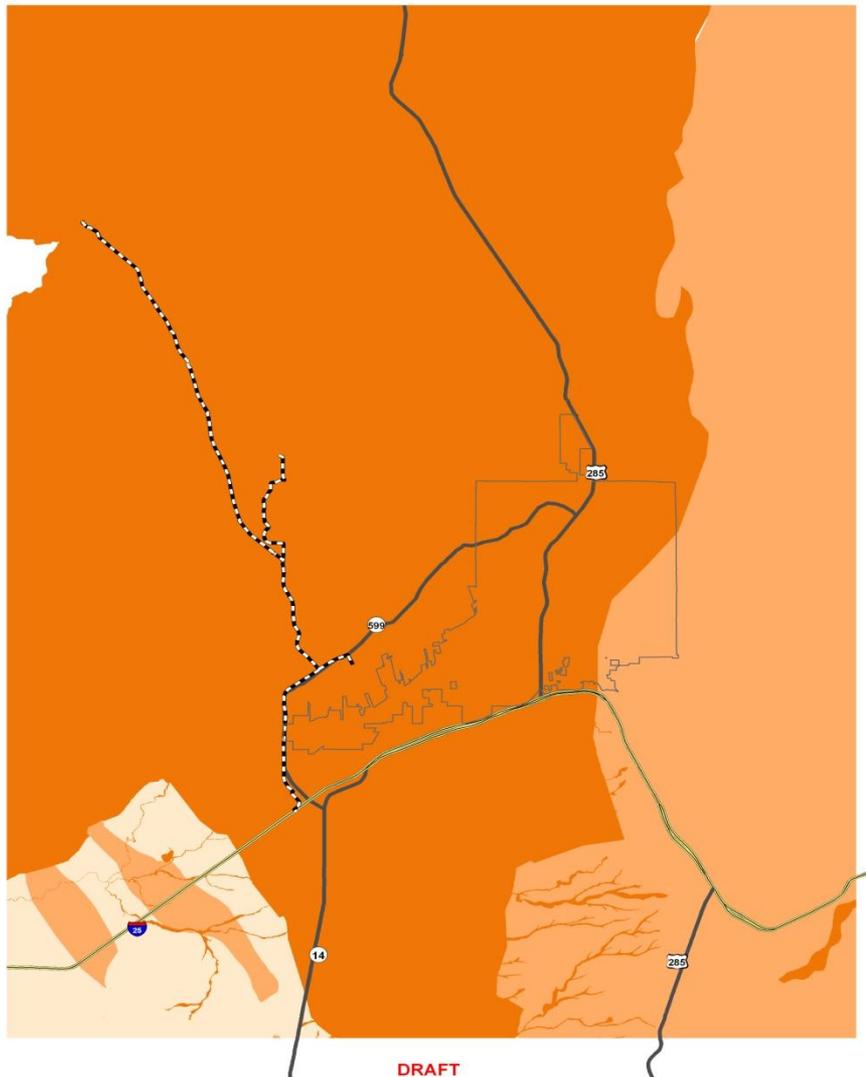

## Factor 1 : Favorable Hydrogeology

Geology Based

**High Suitability** = Tesuque Formation

**Moderate Suitability** = Pre-Cambrian Granite and Permian Limestone

**Low Suitability** = Espinaso or Galisteo Formations

DRAFT  
Factor 1 :  
Areas of Favorable Hydrogeology

0 0.5 1 2  
Miles

**Legend**  
Low Suitability  
Moderate Suitability  
High Suitability  
City of Santa Fe  
BDO PIPELINES

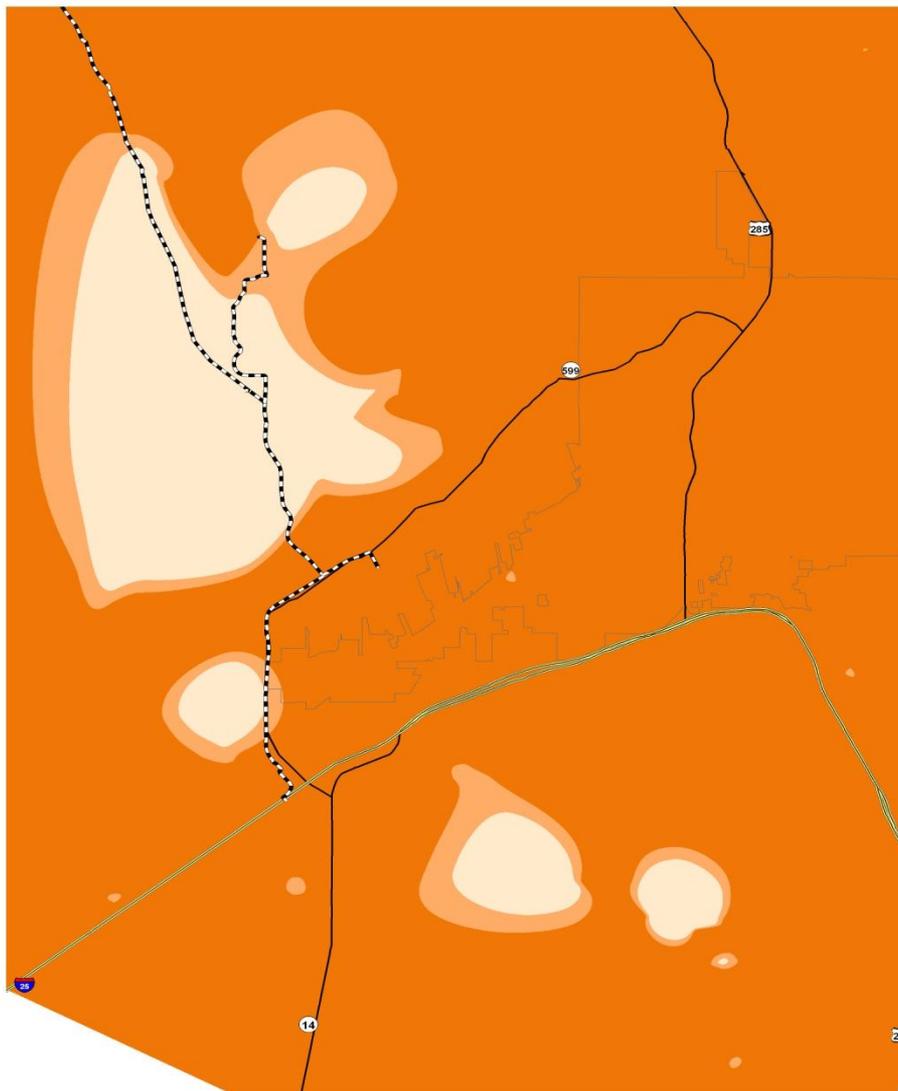

## Factor 2 : Arsenic Contamination

Water Fair Data and NMBGMR Analysis

**High Suitability** = Less than MCL

**Moderate Suitability** = Within Margin of Error of MCL

**Low Suitability** = Exceeds MCL

**DRAFT** Factor 2 :  
Proximity to Areas of Existing  
Arsenic Groundwater Contamination

0 0.5 1 2 Miles

**Legend**  
Low Suitability  
Moderate Suitability  
High Suitability  
City of Santa Fe  
BDO PIPELINES

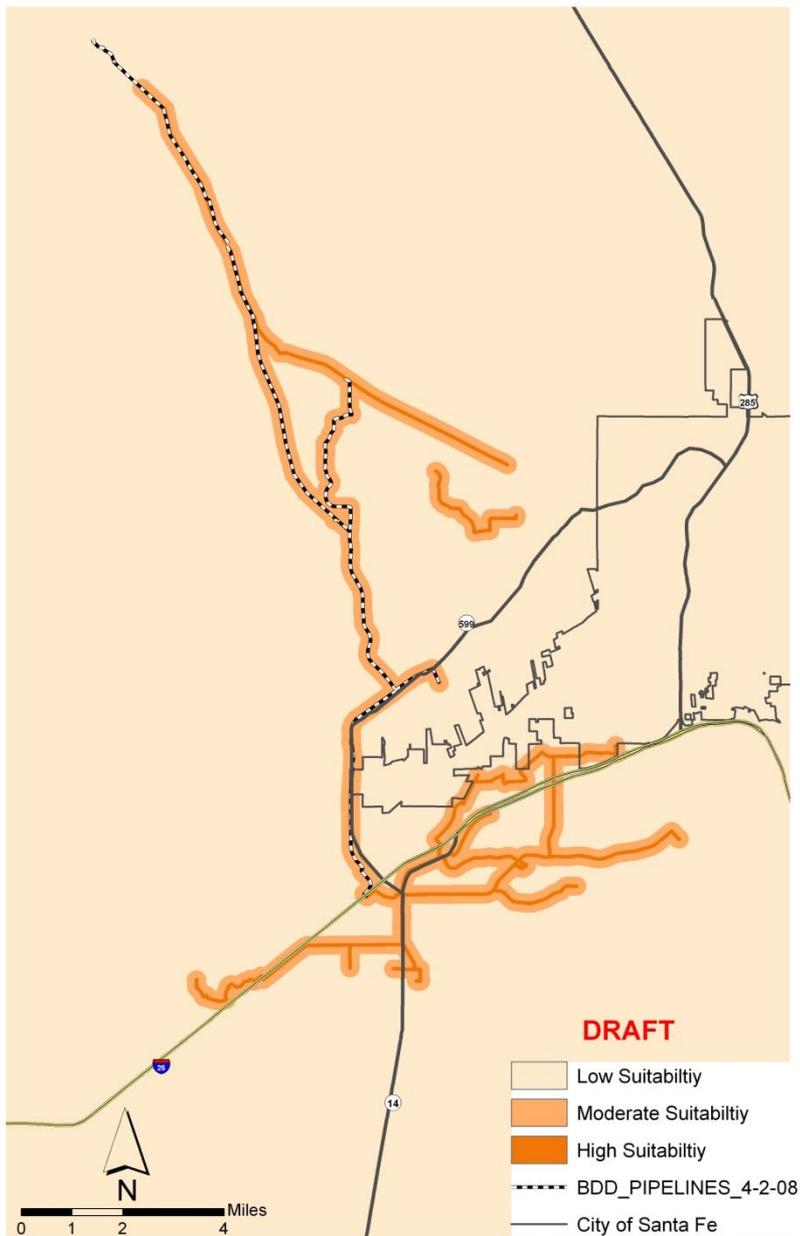

## Factor 3: Proximity to Major Water Lines

Ranks distance to major water lines

**High Suitability** = Less than 200 feet to water line

**Moderate Suitability** = 200 to 1000 feet to water line

**Low Suitability** = Greater than 1000 feet to water line

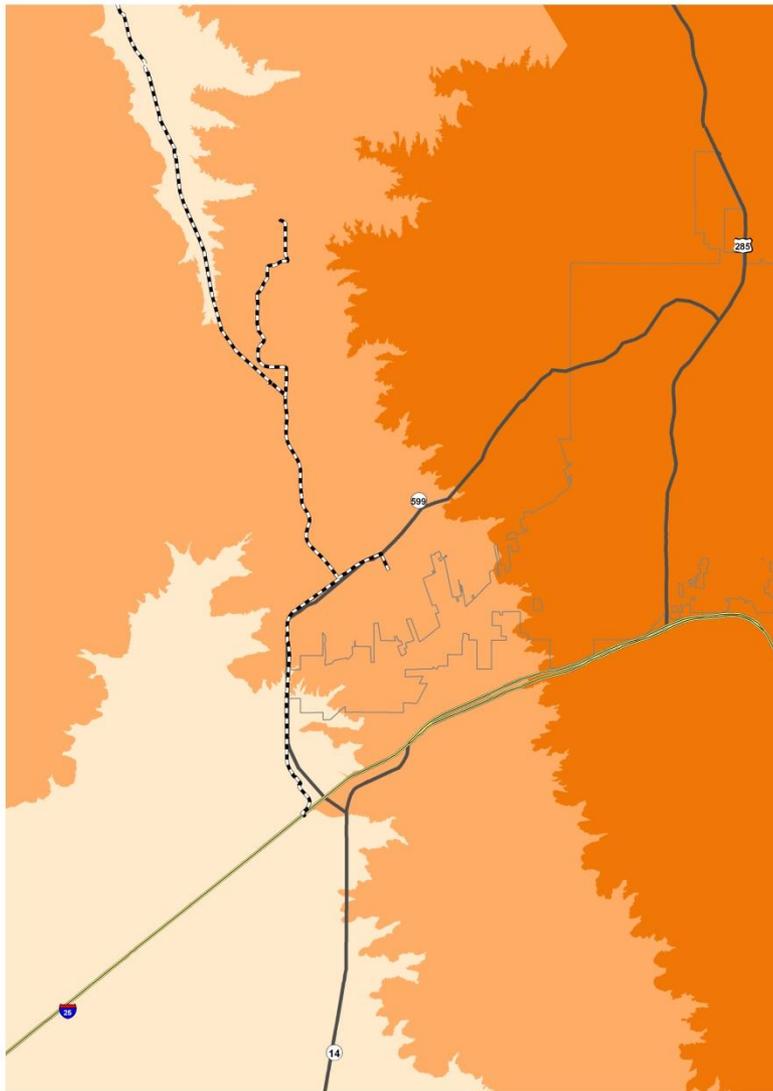

## Factor 4: Pressure Zones

Ranks feasibility of well locations within utility pressure zones

**High Suitability** = Pressure Zones 1 - 6

**Moderate Suitability** = Pressure Zones 7 & 8

**Low Suitability** = Pressure Zones 9 - 11

**DRAFT** Factor 4:  
Feasibility of Pressure Zones

0 0.5 1 2 Miles

### Legend

- Pressure Zones
- Low Suitability
- Moderate Suitability
- High Suitability
- City of Santa Fe

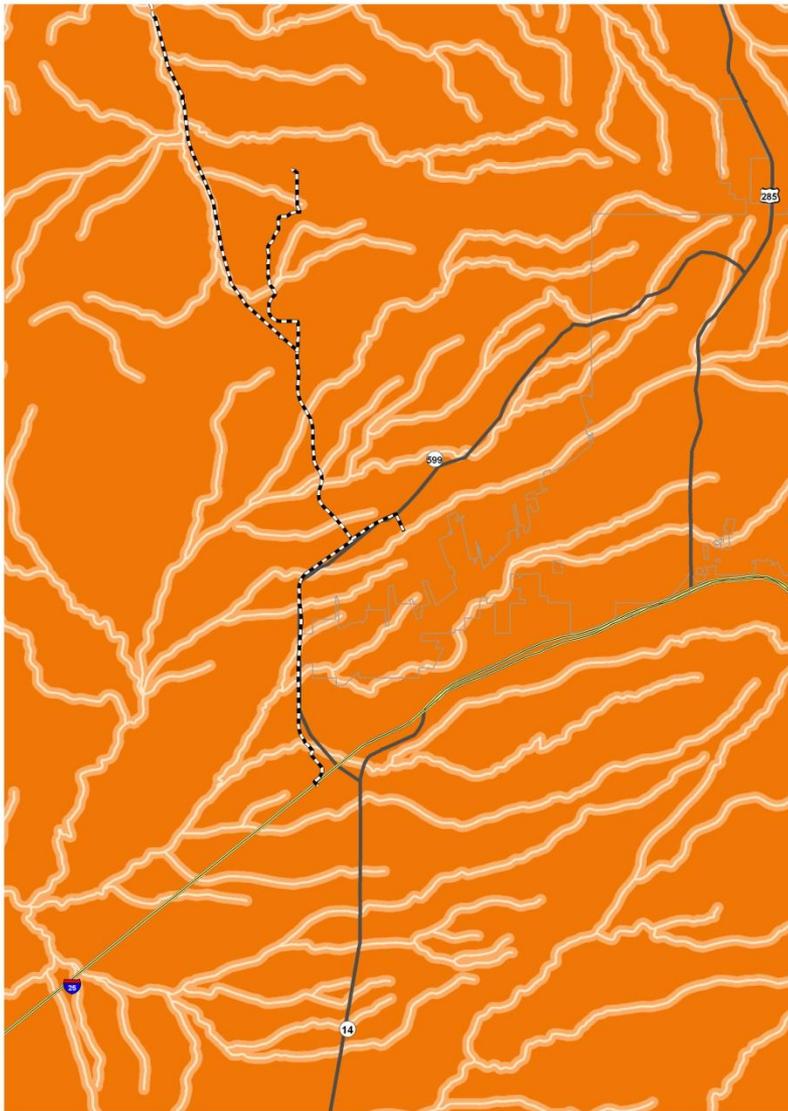

## Factor 5: Drainages

Ranks proximity to major drainages

**High Suitability** = Greater than 500 feet

**Moderate Suitability** = 100 to 500 feet

**Low Suitability** = Less than 100 feet

**DRAFT** Factor 5:  
Proximity to Drainages

### Legend

- Low Suitability
- Moderate Suitability
- High Suitability
- BDD PIPELINES
- City of Santa Fe

0 0.5 1 2 Miles

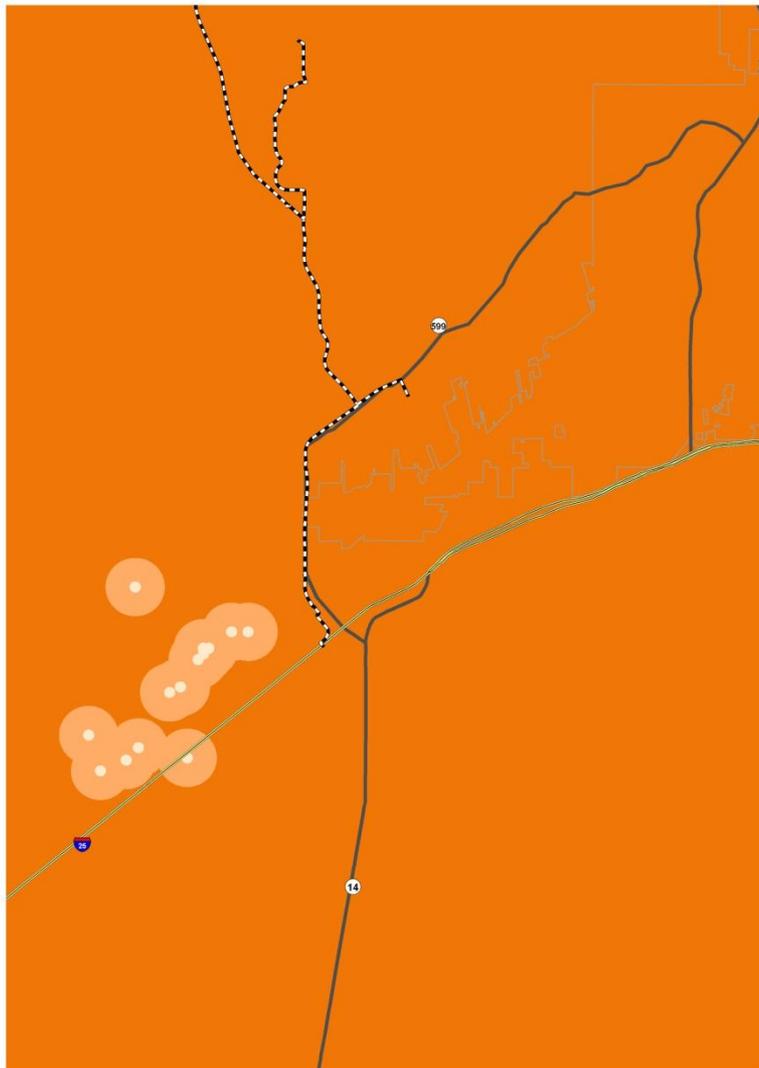

## Factor 6: Springs

Ranks proximity to springs

**High Suitability** = Greater than 1/2 mile from spring

**Moderate Suitability** = 500 feet to 1/2 mile from spring

**Low Suitability** = Less than 500 feet from spring

DRAFT Factor 6:  
Proximity to Springs

Miles  
0 0.3 0.6 1.2

Legend  
Springs  
Low Suitability  
Moderate Suitability  
High Suitability  
City of Santa Fe  
EDO PIPELINES

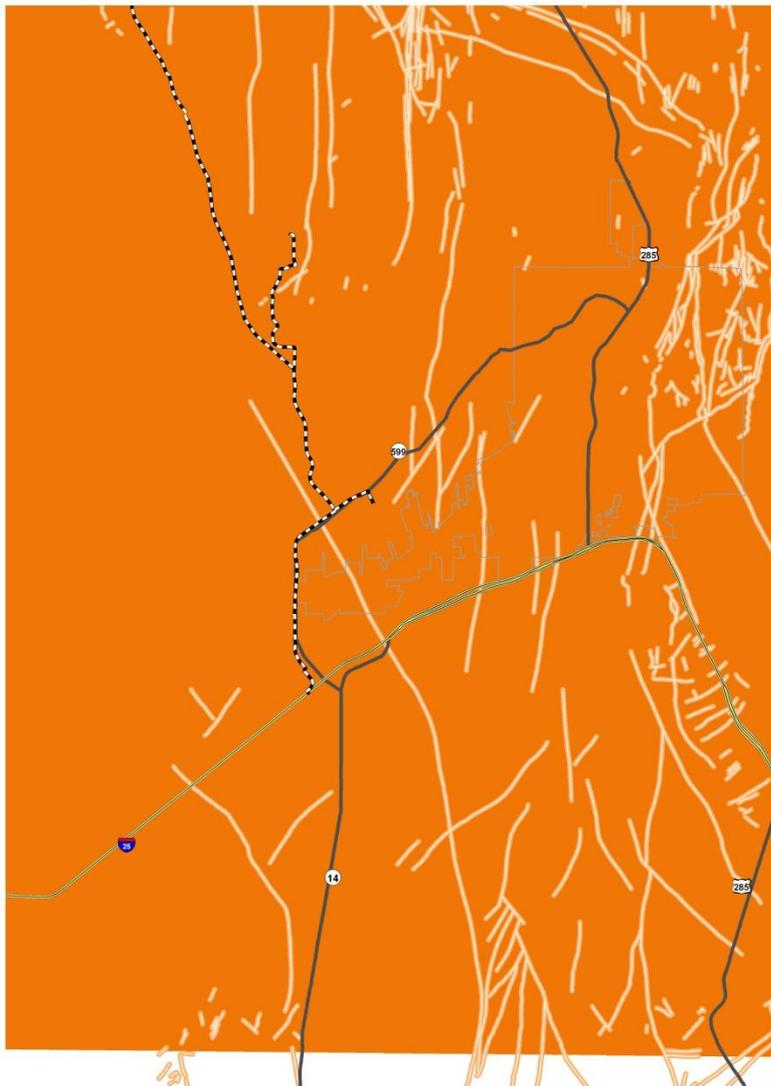

## Factor 7: Faults

Ranks proximity to known faults

**High Suitability** = Greater than 300 feet from fault

**Moderate Suitability** = 100 feet to 300 feet from fault

**Low Suitability** = Less than 100 feet from fault

**DRAFT** Factor 7:  
Proximity to Faults

**Legend**  
**Faults**  
Low Suitability  
Moderate Suitability  
High Suitability  
City of Santa Fe  
BEO PIPELINES

0 0.5 1 2 Miles

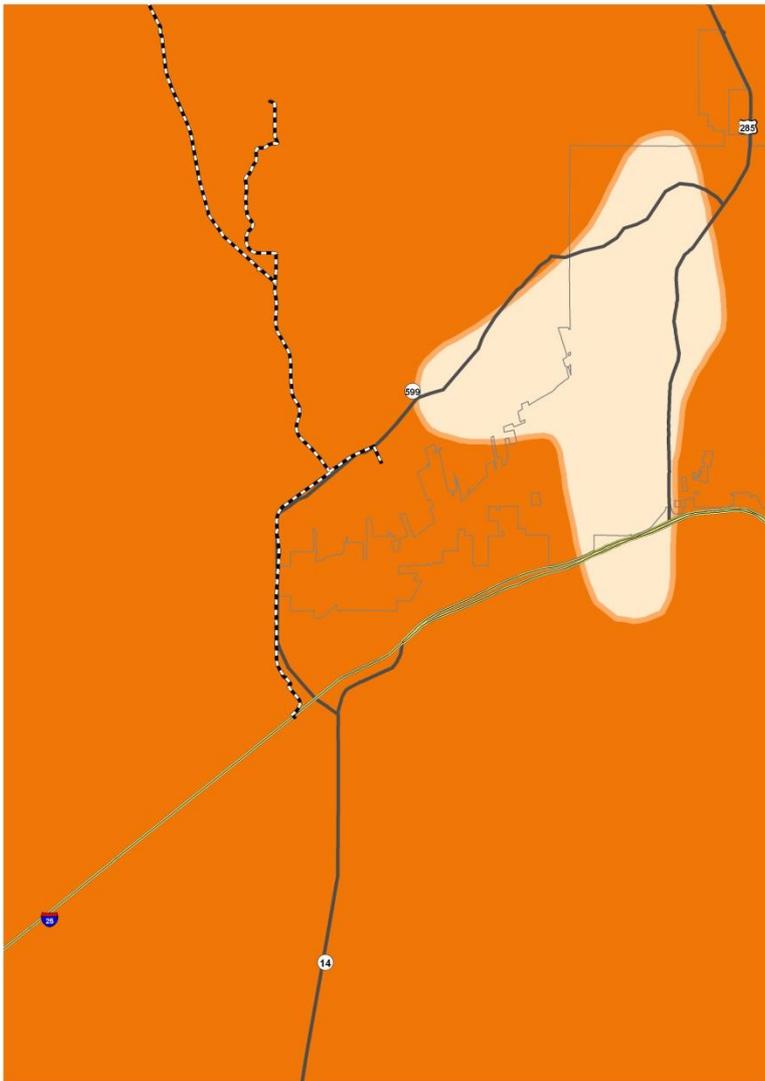

## Factor 8: Aquifer Decline

Ranks proximity to NMBGMR estimated aquifer decline

**High Suitability** = Greater than ½ mile

**Moderate Suitability** = 500 feet to ½ mile

**Low Suitability** = Less than 500 feet

**DRAFT** Factor 8:  
Areas of Aquifer Decline

**Legend**  
Low Suitability  
Moderate Suitability  
High Suitability  
City of Santa Fe  
BDO PIPELINES

Miles  
0 0.3 0.6 1.2

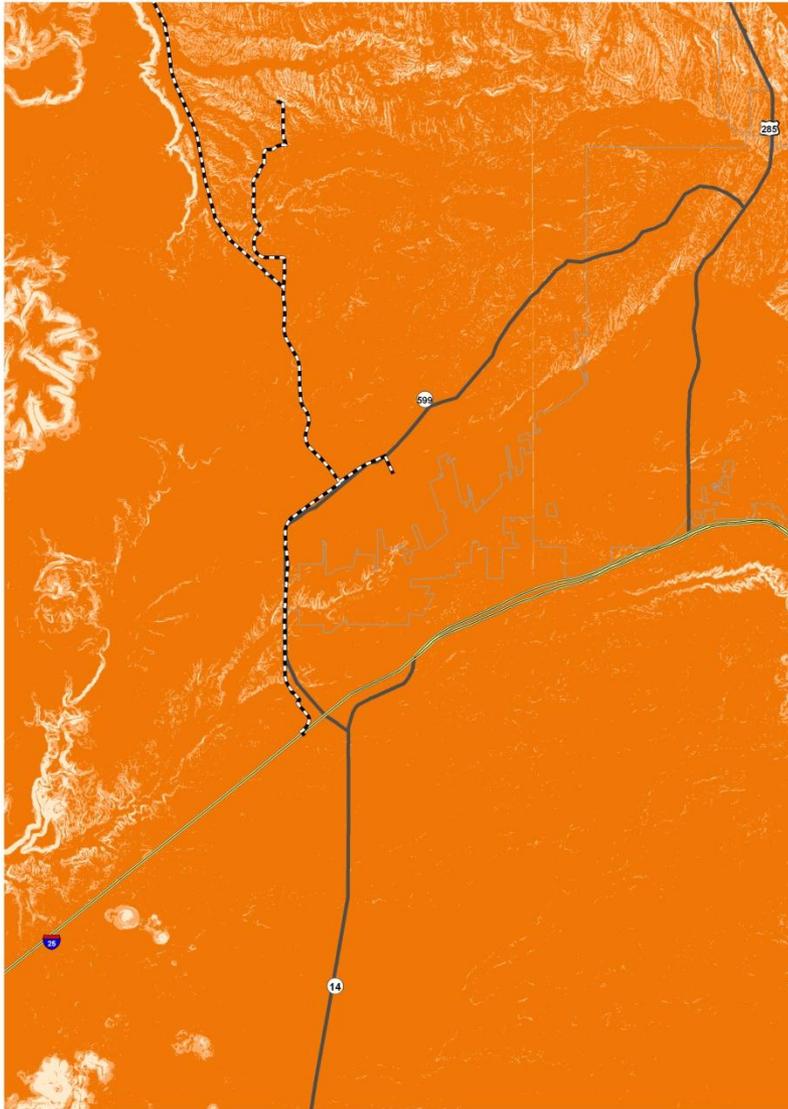

## Factor 9: Slope

Ranks Percent Grade

**High Suitability** = 0 to 15%

**Moderate Suitability** = 15 to 33%

**Low Suitability** = Greater than 33% grade

**DRAFT** Factor 9:  
Slope-Percent Grade

0 0.3 0.6 1.2 Miles

**Legend**  
**VALUE**  
Low Suitability  
Moderate Suitability  
High Suitability  
City of Santa Fe  
BDO PIPELINES

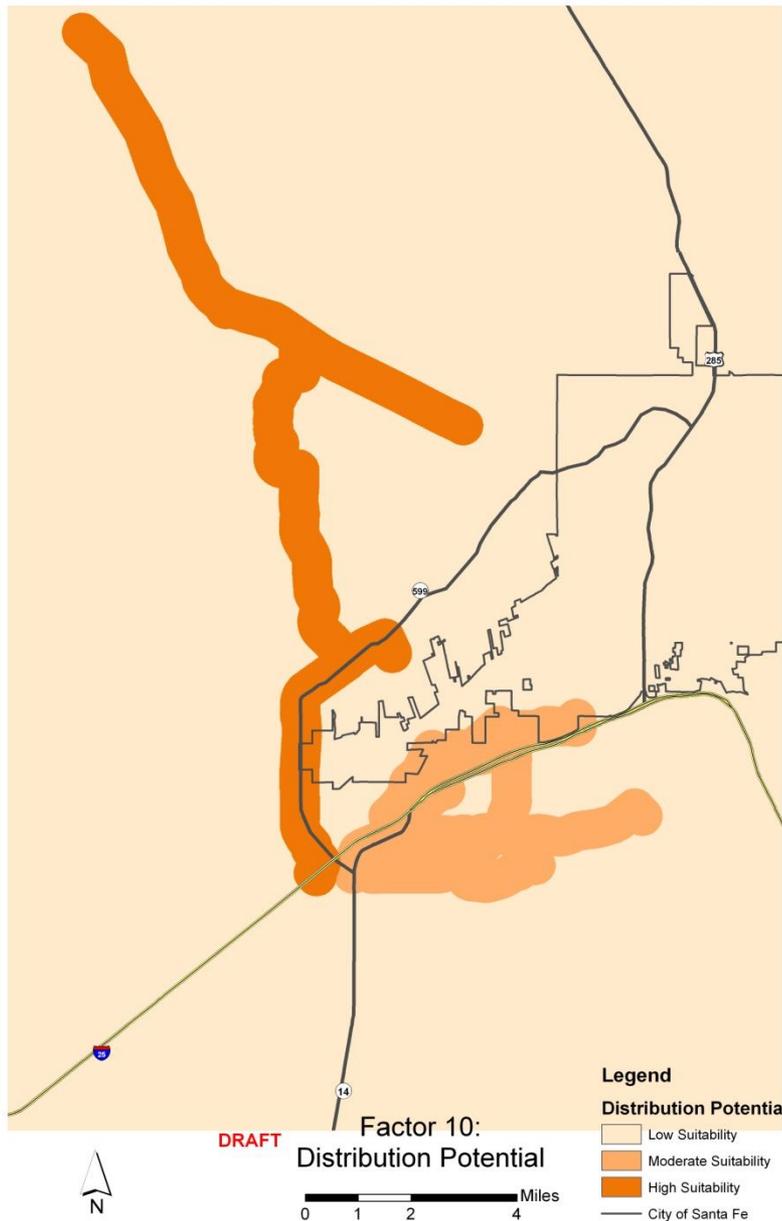

## Factor 10: Distribution Potential

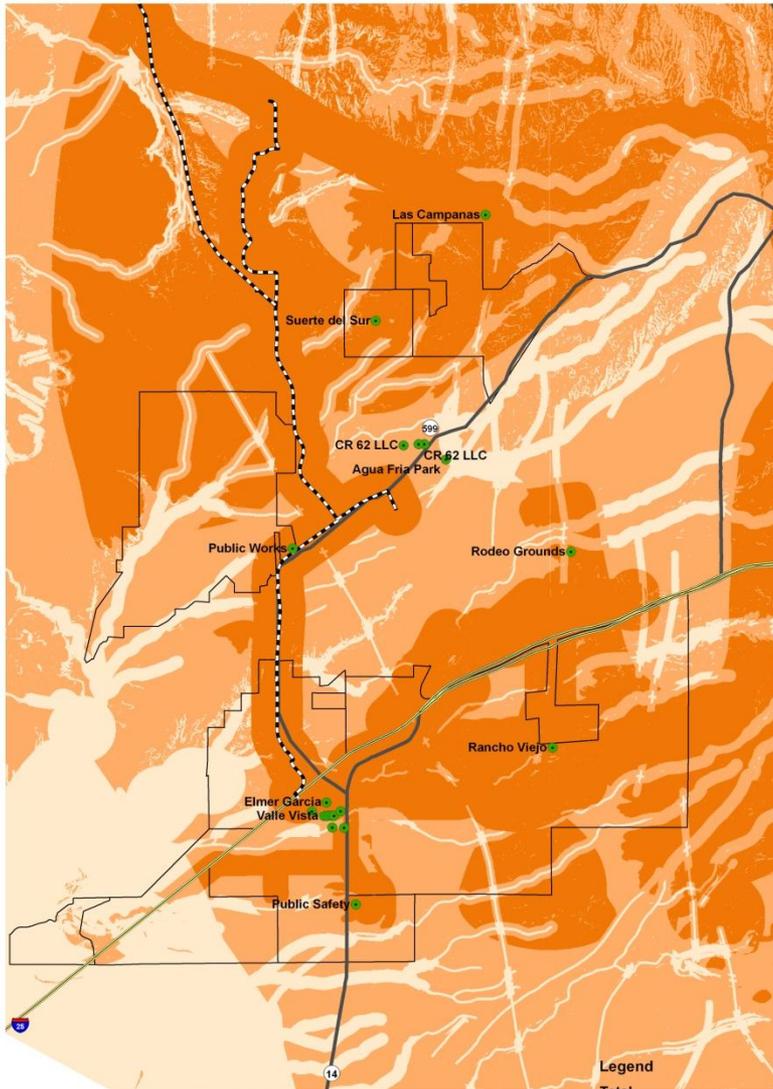

Ranks the ability to serve the utility within a 2000 foot buffer

**High Suitability** = Can serve all utility

**Moderate Suitability** = Can Serve portion of Utility

**Low Suitability** = Can not easily serve utility

**DRAFT** Total:  
All Factors Added Together

- Legend**
- Total**
  - Low Suitability
  - Moderate Suitability
  - High Suitability
  - Potential Well Locations
  - Service Area
  - BDD Pipe Lines

## Total : All Factors

All Factors were added together and grouped by natural Jenks into 3 groups

**High Suitability** = Dark Orange

**Moderate Suitability** = Medium Orange

**Low Suitability** = Cream

# Next Steps:

**5 Public Hearing will be held to seek input**

- **Wednesday, September 23rd 6:00 pm to 8:00 pm at the Nancy Rodriguez Center (1 Prairie Dog Loop)**
- **Thursday, September 24th 6:00 pm to 8:00 pm at the Eldorado Senior Center (14 Avenida Torreon)**
- **Monday, September 28th 6:00 pm to 8:00 pm at the Rodeo Grounds Extension Office (3229 Rodeo Rd.)**
- **Tuesday, September 29th 6:00 pm to 8:00 pm at the Santa Fe County Edgewood Satellite Office (1916 Old US 66, Edgewood)**
- **Wednesday, September 30th 6:00 pm to 8:00 pm at the Pojoaque Satellite Office (West Gutierrez, Suite 9, Pojoaque Center)**

# Next Steps:

- The map based methodology will be finalized
- The top ranked areas will be evaluated for ability of land acquisition
  - County Property
  - Private Property with offers from Land Owners to acquire
  - Compile list of Property Owners to Contact
- Once Areas are estimated an analysis of nearby wells and cost will be preformed.
- Top Locations based on cost, time factors and estimated impacts to nearby wells will be presented to the BCC on October 27<sup>th</sup>, 2009
